6 March 2009

## Space engineering

### Technical requirements specification

## 6.2 Identification of types of technical requirements

### 6.2.1 Introduction

The differing types of technical requirements contained in the TS are as follows

- functional requirements,
- mission requirements,
- interface requirements,
- environmental requirements,
- operational requirements,
- human factor requirements,
- (integrated) logistics support requirements,
- physical requirements,
- product assurance (PA) induced requirements,
- configuration requirements,
- design requirements,
- verification requirements.

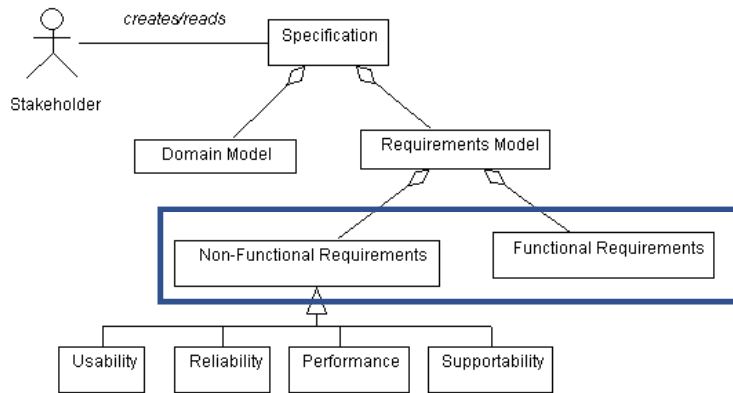

<b>8</b>	<b>Requirements for formulating technical requirements</b>	<b>24</b>
8.1	General	24
8.2	Requirements for the characteristics of a technical requirement of a TS	24
8.2.1	Performance	24
8.2.2	Justification	24
8.2.3	Configuration management and traceability	25
8.2.4	Ambiguity	25
8.2.5	Uniqueness	
8.2.6	Identifiability	
8.2.7	Singularity	
8.2.8	Completeness	
8.2.9	Verification	26
8.2.10	Tolerance	26

### 8.2.9 Verification

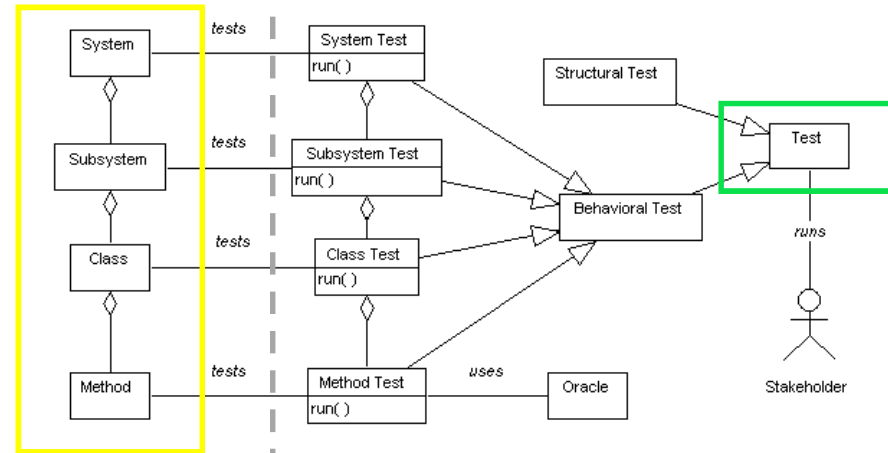

- a. A technical requirement shall be verifiable using one or more approved verification methods.

NOTE A technical requirement is verifiable when the means to evaluate if the proposed solution meets the requirement are known.

## EXPERIMENT INTERFACE DOCUMENT - PART A

### 5.1.2 Science Ground Segment

D: The Solar Orbiter Science Ground Segment (SSGS) will consist of:

1. A Solar Orbiter Science Operations Centre (SSOC), responsible for scientific mission planning and experiment command request preparation for consolidated submission to the SMOC.
2. Pipeline processing of science telemetry in support of the PI teams and preparation of the ingestion of the scientific data products into the Solar Orbiter Archive.

D: The science operations will be conducted from the SSOC in close collaboration with the PI teams and the SMOC. The SSGS will be responsible for the coordination, planning and execution of science operations and for data archiving, which includes establishing the Solar Orbiter Archive.

EIDA-3301//

*EIDA R-354: The PI shall make available the necessary resources to support the science operations conducted from the SSOC.*

D: The SDDS will process the input telemetry stream from the SMOC into the various data levels described below.

	- 1/31 -	

Figure 0.3

Requirement Number	Requirement Description	Priority
REQ-RPW-SCI-0012	RPW shall characterize, accordingly to its science objectives, the electric part of the waves that play a role in the solar wind physics in the 10 kHz to 16 MHz frequency range.	
REQ-RPW-SCI-0013	Each ANT monopole has to behave at high frequency, in terms of the emission diagram and impedance, like a monopole of a given length $L$ and diameter $D$ .	
REQ-RPW-SCI-0014	Given the solar wind density and temperature variations reported in section 3.3 and the corresponding Debye Lengths, $L$ has to be larger than 5 meters in order to allow correct Thermal Noise measurements. The upper limit for $L$ shall be compatible with the mechanical requirements from the platform and the RPW overall resources.	
REQ-RPW-SCI-0015	For minimizing the shot noise perturbations on the thermal noise measurements, the ANT diameter has to be as low as possible, being

## 6.2 Data processing

### 6.2.1 Producing RPW data files

The ROC will produce RPW science data files daily.

The convention concerning the Solar Orbiter payload science data is described in [RD6]. The list of RPW science data to be produced by the ROC is available in [AD2]. Other data products are described in [RD18].

REQ-ROC-CIRD-0004	Producing RPW LZ data	Test
The ROC shall produce the RPW LZ data defined in [RD18]. The LZ data files shall store the RPW TM packet data as delivered by the MOC.

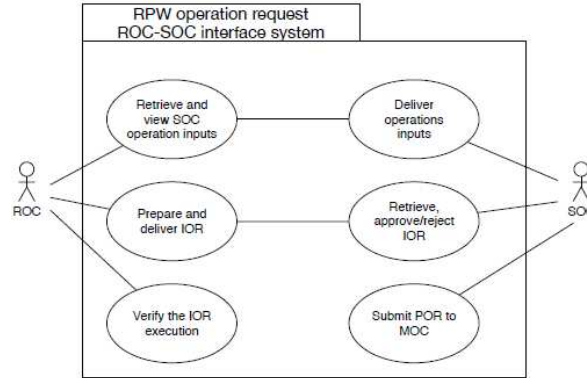

Figure 7. RPW operation requests: ROC-SOC interface nominal use case.

The use case will have the following steps:

1. The SOC delivers to the ROC via the GFTS the operations inputs relative to a given MTP cycle, covering ~6-month orbit. The delivery will be done 6 months prior to the MTP-cycle start.
2. The ROC retrieves the operations inputs, which can be viewed from the MUSIC OPERA interface.
3. The ROC prepares and generates a first set of IORs for the MTP cycle
4. The RPW MTP IORs are delivered to the SOC via the GFTS mechanism.
5. The SOC will then perform a first validation of the IORs and check that they are consistent with the mission operations timeline and constraints. The SOC can reject the IORs if the requirements are not met.

## 4 MUSIC GUI REQUIREMENTS

### 4.1 MUSIC main page specific requirements

#### 4.1.1 MUSIC main page user requirements

REQ-ROC-SSS-0001	MUSIC main page content	Test
MUSIC shall have a main page, from which the users can at least: <ul style="list-style-type: none"> <li>- Sign up (i.e., access to the registration form)</li> <li>- Sign in</li> <li>- Access to the MUSIC application tools (TV, FIGARO, FAUST, OPERA and SISSI)</li> <li>- Contact the ROC support (i.e., webmaster)</li> <li>- View the MUSIC user manual</li> <li>- Check the version of MUSIC and its components</li> <li>- Go to relevant external links (e.g., RPW Web page, etc.)</li> <li>- View the status and news related to the application (Application is run correctly, Application is stopped for upgrades/bugs fixing, Upgrade will be performed in 2 days)</li> </ul>

### 3.1 Operational requirements

Requirement Number	Requirement Description
REQ-ROC-001	The ROC shall participate, under the responsibility of CNES, to the commissioning of the RPW instrument (see [RD1])
REQ-ROC-002	The ROC shall comply to the high level requirements defined in [AD2 & AD3]
REQ-ROC-003	The ROC shall operate the instrument following the specific modes defines by the RPW consortium & ROB, in agreement with the mission timeline defined by the SWT and SOWG
REQ-ROC-004	The ROC shall operate the BIAS and set the biasing current under the supervision of the BIAS lead Col and team and in accordance to the operation plans defined by the RPW consortium & ROB
REQ-ROC-005	The ROC shall provide to the RPW consortium and ROB all the necessary tools to access and visualize the data in order to help defining the modes
